### **DETAILED ACTION**

The rejection under section 103 is withdrawn since Curran does not teach conducting a fluororous reaction in the presence of a solid adsorbent containing fluororous domains.

The following is a new ground of rejection:

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 6-8, 10-25, 27, 29-72 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wende et al., J. Am. Chem. Soc. 2001, 123, 11490-11491 (Wende) or Curran et al., Synlett 2001, No. 9, 1488-1496 (Curran).

Wende teaches Teflon beads were used as an adsorbent and were extracted to retrieve a catalyst. A non fluororous system was used. See page 11491, left column. Curran teaches fluororous solid phase extractions without a fluororous environment, see pages 1491+. Although the references may not explicitly teach changing at least one reaction condition, the references teach extraction of the solid phase, which reads on "adding an additive", and thus, renders the instant claims prima facie obvious. With regard to the specific reagents and catalysts recited in the claims, those of ordinary skill

would expect that these can also be used with the disclosed process given the similar nature of the reagents and catalysts used in the references vis-à-vis those in the claims.
